

# Where to Install a New Hostel In Rio de Janeiro?

## A Data Analysis Approach

---

Capstone Project  
IBM Data Science Professional Certificate

Felipe N. Ruperti

July 2019

# Introduction

## Some facts about Rio de Janeiro:

- The city had 18,204,831 arrivals in the year of 2014, according to the Secretary of Tourism of the State of Rio de Janeiro.
- Rio only had 75 hostels and, when considering hotel rooms, Rio was placed on the 77th position, according to the Price of Travel website.

**Conclusion:** there are unexplored opportunities in the low-budget tourism sector.

**Objective:** this study provides a data analysis approach in order to spot the best neighborhoods of where to install a new hostel in the city of Rio de Janeiro.

# Methodology - Data Preparation

The dataset was created following two steps:

- 1 The initial data consists of 139 geospatial points/spots, which had their latitude and longitude gathered manually from the GPS website.
- 2 The initial data latitude/longitude of each point was used in order to obtain two variables: main/primary and specific/secondary venue types from the Foursquare developer api. The radius from each point was set in 350 meters and the limit of venues retrived per neighborhood was set in 500<sup>1</sup>. As there are many venues per neighborhood, the dataset has a total of 4,737 observations and 8 columns/variables. Table 1 shows the first 3 observations of the dataset.

# Methodology - Data Preparation

	Neighborhood	Latitude	Longitude	Venue	Venue Latitude	Venue Longitude	Main Venue Category	Venue Category
1	Leme 1	-22.962373	-43.168171	Bar do David	-22.960691	-43.168878	nightlife	Bar
2	Leme 1	-22.962373	-43.168171	Ponta do Leme	-22.962557	-43.166152	parks_outdoors	Beach
3	Leme 1	-22.962373	-43.168171	Calçadão do Leme	-22.962679	-43.167250	parks_outdoors	Pedestrian Plaza

Table: First 3 Observations of the Dataset

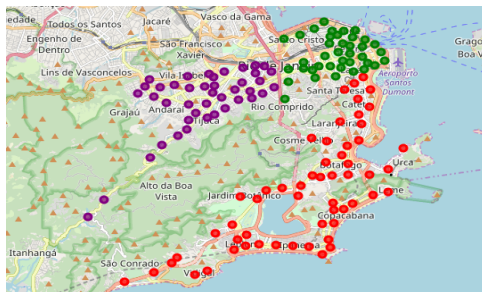

Figure: Rio's Districts - Neighborhoods

# Methodology - Descriptive Analysis and K-Means

- **Descriptive Analysis:** was used in order to have a better understanding of the venues and its spatial distribution across neighborhoods. Statistics as mean, median, mode and graphs as heatmaps, bar charts and histograms were employed to enhance insight.
- **K-Means:** was the algorithm herein applied for data clustering, because it is simple to understand and deploy and provides further insight into the data, by grouping the neighborhoods according to their secondary venue types.
  - Metric: euclidian distance.
  - Initialization: k-means++
  - Optimal k: iteration from  $k = 3$  to 20, using the total within sum of squares in the silhouette/elbow method.

# Methodology - Ranking

- **Variables:**

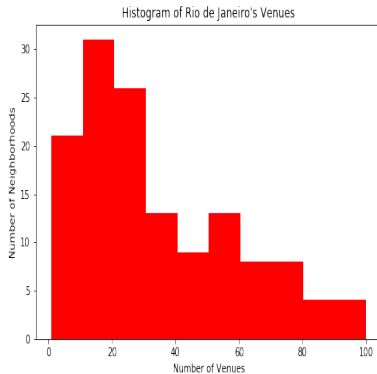

- Number of Venues for Tourism
- Number of Venues for Tourism/Per Hostel + Newcomer
- Counts of Scenic Lookouts and Beaches

- **Data Preparation:** min-max normalization of the variables.

- **Ranking Composition:**

60%N of Venues for Tourism +  
30%N of Venues for Tourism/Per Hostel & Newcomer +  
10%N of Scenic Lookouts & Beaches

# Results - Descriptive Analysis

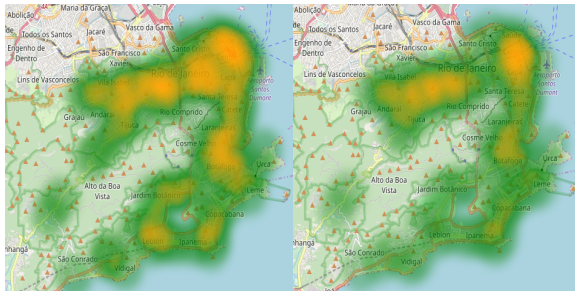

Figure

Mean = 35 & Median = 27

# Results - Descriptive Analysis - Heatmap 1

The number of distinct specific/secondary venues for Rio totals 296. On the other hand, there are 8 main/primary venue categories found on Foursquare: arts and entertainment, building, education, events, food, nightlife, parks & outdoors and shops.

(a) Parks and Outdoors

(b) Shops

## Results - Descriptive Analysis - Heatmap 2

(a) Arts & Entertainment

(b) Building

(c) Education

(d) Events

(e) Food

(f) Nightlife

Figure: Primary Venue Heatmaps - Part II

## Results - Descriptive Analysis - Heatmap 3

(a) Hostels

(b) Scenic Lookouts and  
Beaches

Table: Ranking - Top 20 Neighborhoods for Hostels

## Conclusion

The results of the top 20 best neighborhoods for the installment of a new hostel based on the number of venues, the competition from existing hostels and nearby scenic lookouts and beaches is consistent to what would be expected when considering the characteristics of the neighborhoods and touristic opportunities.

There will be a trade-off regarding the neighborhoods in the city Rio de Janeiro between rent price vs safety at night and between beaches vs number of cultural/historic venues, that is reflected in the differences between the South Zone and Downtown district.

This creates specific strategies, notably for marketing, that the entrepreneur should take into account, because the neighborhood/district/location will determine not only the price per stay to be charged, but, specially, the hostel's touristic profile.
